Knowledge Representation and Semantic Technologies

Exercises on OWL

Riccardo Rosati

Corso di Laurea Magistrale in Ingegneria Informatica Sapienza Università di Roma 2016/2017

Exercise 1

Write an OWL ontology representing the following statements:

- URI1 and URI2 are classes
- URI3 is a property
- URI4 is an instance of class URI1, and URI5 and URI6 are instances of class URI2
- URI3 has domain URI1 and range URI2
- (URI6,URI4) is an instance of property URI3

Exercise 1: Solution

```
Declaration(Class(myns:URI1))
Declaration(Class(myns:URI2))
Declaration (ObjectProperty (myns:URI3) )
ClassAssertion(myns:URI1 myns:URI4)
ClassAssertion(myns:URI2 myns:URI5)
ClassAssertion(myns:URI2 myns:URI6)
SubClassOf(
  ObjectSomeValuesFrom(myns:URI3 owl:Thing)
  myns: URI1)
```

Exercise 1: Solution (continued)

```
SubClassOf(
   ObjectSomeValuesFrom(
      ObjectInverseOf(myns:URI3)
      owl:Thing)
   myns:URI2)

ObjectPropertyAssertion(myns:URI3 myns:URI6
   myns:URI4)
```

Exercise 2

Write an OWL ontology that formalizes knowledge about the domain of people, in particular the classes person, man, woman, and the properties parent, mother, father.

Try to express all the knowledge you have about such classes and properties (e.g.: every man is a person, every woman is a person, every mother is a woman, etc.).

Exercise 2: Solution

```
(every man is a person)
SubClassOf(myns:man myns:person)
                                         (every woman is a person)
SubClassOf(myns:woman myns:person)
SubObjectPropertyOf (myns:hasMother myns:hasParent)
  (hasMother is a subproperty of hasParent)
SubObjectPropertyOf (myns:hasFather myns:hasParent)
  (hasFather is a subproperty of hasParent)
SubClassOf(
  ObjectSomeValuesFrom(
    ObjectInverseOf (myns:hasMother)
    owl: Thing)
  myns:woman) (every mother is a woman)
```

Exercise 2: Solution (continued)

```
SubClassOf(
  ObjectSomeValuesFrom(
    ObjectInverseOf(myns:hasFather)
    owl:Thing)
  myns:man) (every father is a man)

ClassAssertion(myns:man myns:Joe) (Joe is a man)

ObjectPropertyAssertion(myns:hasMother myns:Joe
  myns:Ann) (Ann is the mother of Joe)
```

Exercise 3

Add to the ontology of Exercise 2 the following information:

- Man and woman are disjoint classes
- Every person has a mother
- Every person has a father
- Every person has exactly two parents
- Every person has a father, who is a man
- Every person has a mother, who is a woman
- Every person has a father and a mother

Exercise 3: Solution

```
1) DisjointClasses(myns:man myns:woman)
                                              (man and woman
  are disjoint classes)
2) SubClassOf(
    myns:person
    ObjectSomeValuesFrom(myns:hasMother owl:Thing))
  (every person has a mother)
3) SubClassOf(
    myns:person
    ObjectSomeValuesFrom(myns:hasFather owl:Thing))
  (every person has a father)
```

Exercise 3: Solution (continued)

```
4) SubClassOf(
    myns:person
    ObjectExactCardinality(2 myns:hasParent))
  (every person has exactly two parents)
5) SubClassOf(
    myns:person
    ObjectSomeValuesFrom(myns:hasFather myns:man))
  (every person has a father who is a man)
6) SubClassOf(
    myns:person
    ObjectSomeValuesFrom(myns:hasMother myns:woman))
  (every person has a mother who is a woman)
```

Exercise 3: Solution (continued)

```
7) SubClassOf(
    myns:person
    ObjectIntersectionOf(
        ObjectSomeValuesFrom(myns:hasMother owl:Thing)
        ObjectSomeValuesFrom(myns:hasFather owl:Thing)))
(every person has a mother and a father)
```

Notice that axiom 7) is equivalent to the above pair of axioms 2) and 3)
